

PROJECT TITLE:

Mission Canyon Bridge Safety Enhancements

PROJECT OVERVIEW:

The Mission Canyon Road Bridge over Mission Creek (Bridge) is eligible for rehabilitation under the federally funded Highway Bridge Program (HBP) administered by Caltrans. The project would rehabilitate the existing historic two-lane bridge and approach alignments, improving sight distances and providing dedicated space for pedestrians and bicyclists. However, any project needs to be balanced with the abundance of historic resources in the area.

PROJECT DEVELOPMENT AND COMMUNITY ENGAGEMENT:

Safety enhancements have the potential of minimizing vehicle collisions on the Bridge and approaching it. Bicyclist and pedestrian access would be made safer. The challenge is to balance enhancements with natural and historic resources near the Mission. The project will include a parallel environmental impact investigation and community engagement process to discover the least amount of impact to the area and apply the greatest amount of preservation techniques. Through this process, City and County decision makers will determine if such a balance can be reached.

This Project is parallel to a larger effort to improve multimodal circulation in the Mission Canyon corridor called the Mission Park to Mission Canyon Multimodal Improvements Plan.
